The University from Lithuania has created and offers biofilter - absorber for removing organic compounds and odors from the air.

Lithuania published 21 days ago

General information

Title

The University from Lithuania has created and offers biofilter - absorber for removing organic compounds and odors from the air.

Short summary

The University from Lithuania, which has 13 institutes, 3 research centers and 22 laboratories, has created and offer biofilter - absorber. This technological solution was created for removing organic compounds and odors from the air. University is looking for partners to work under a licensing agreement or technological cooperation agreement.

Full description

The University from Lithuania is developing biofilters - adsorbers with biologically activated charge made of bio carbon. The biofilter is used to clean the air from volatile compounds of organic origin, such as acetone, xylene, toluene, butanol, styrene, butyl acetate, etc. It can be used in chemical, food, wood and oil processing companies, printing houses and other industries where volatile organic solvents are released. The biofilter can be installed in companies where various thinners and solvents are used to clean parts or equipment. The biofilter cleans the air not only from volatile organic compounds, but also removes unpleasant odors. Additionally, it can be used in agriculture (slaughterhouses, farms), landfills where hydrogen sulfide is released into the environment. Application in the market: • For the cleaning of organic compounds from the air, the biofilter can be used in chemical, food, wood and oil processing companies, printing houses and other industries where such compounds are released, as well as in companies where various thinners and solvents are used to clean parts or equipment. • For cleaning odors from the air, the biofilter can be used in agriculture (slaughterhouses, farms), landfills where hydrogen sulfide is released into the environment. The technological solution is to reach the development level of TRL7

Advantages and innovations

The main feature of this biofilter-adsorber is its durability. The biofilter can be used for up to 10 or even more years. Another important advantage of the product is sustainability, i.e. climate neutrality. Since the microorganisms contained in the bioactive carbon clean the air, there is no waste, everything is consumed.

Stage of development IPR status

Available for demonstration IPR granted

Sustainable Development Goals

Not relevant

Partner Sought

Expected role of a partner

The University would like to seek cooperation with one of the biofilter manufacturers by licensing their technology.

Brokerage Event

We will be connecting public entities and the industry, at **this 9th edition of the Brokerage Event! Smart City Challenges: on site the 15th - 17th November**, and online the 22nd - 24th Nov.

It will be run by [ACCIÓ](#), Catalonia's Trade and Investment Agency, with the support of the [Enterprise Europe Network](#), the largest business network worldwide, and [Project GOOSE](#).

This year's Brokerage will include 3 thematic Challenges...

The three Smart City Challenges!

Cities' Challenges

Cities/regions exposing their upcoming procurement plans in the different Smart city areas. Aiming at better/smarter public services, they will benefit from the event's large audience, grasping and interacting with the market, to finally enhance their Efficiency+Effectiveness.

Open Innovation Challenges

Matchmaking between the **Demand and Supply, focusing on innovative solutions**, from both the public side (municipalities, regions, ministries) and corporations.

Green Transition Challenges

Display of innovative solutions for **cities' sustainability and green transition policies**, from a public-private-people collaboration standpoint.
